Do you know that the future of STEM is in the hands of girls?

Are you between 14 and 16 years old and want to be one of the girls who will change the future of coding and create innovations that can "save" our planet? Apply for the GirlsCode Camp and you will learn exactly that, STREAM skills!

We are located in the Enchanted Forest where, during the first week of July (from July 3rd to July 8th), you will:

✓ Learn how we can learn STEM and programming while camping in the forest;

✓ Create a robotic animal from Lego bricks;

✓ Discover how robots can be visual artists and musicians;

✓ Explore how programming can help you if you get lost in the forest;

✓ Find out how the natural ecosystem has inspired most of the technologies we use in everyday life;

✓ Learn how we can use technology to create a sustainable future for all people and nature;

✓ Develop teamwork skills around the campfire, nature orientation, camp preparation, and shelter building for wilderness survival;

✓ Experience how our own differences can strongly connect us as a team!

In this team of 10 girls, you will spend 6 days of an intensive GirlsCode Camp program sleeping in tents in a real scout camp. You will manage a robot and use real scouting tools. You will discover how technology and nature should complement each other to create new innovations, as well as entrepreneurial skills for the future that awaits us.

If this post has caught your interest, download the resume from the attachment and apply at:
